Introduction

Monuments can be seen all around the world and they can be a factor for various countries to show the world what they have experienced or what they are proud of ,Choosing to build a monument to highlight a certain occasion can end up being difficult to do, but will have a great impact that you need to share it with the world. There are numerous factors that should be considered appropriately. For instance, the area of the monument should be thought of (where to place this monument), time (when will be the perfect time to launch such a piece of art) and money (will economic benefits the country will get is equal to what the country spent to build it), and who/what the monument will represent is a factor that is significant when choosing to build a monument so the idea coming for us to make an app that can easy can recognize the photo or statues of kings and give information about this king in the photo, translate from hieroglyphs to English by ML model and NLP, store data for visiting for every users and visit time (history of visiting), has map for tourism place to get the place you want more fast and show the price of tickets for each tourism place
